

Grade: 11th

Teacher: Mr. Eric Crespo (eric.crespo@gmail.com)

Textbook: Holt McDougal; Chemistry; Sarquis, Sarquis; (2012)

Materials required: Notebook, pencils, erasers and loose leaf paper. Calculators will be used in class and on tests when directed by the teacher. Phones, iPods, mp3 players, or any other devices are not allowed as calculators. Any other materials required will be requested with, at least, five (5) days of prior notice.

Course Description: Chemistry is a course which covers the scientific study of the composition, structure, and properties of matter and the changes that matter undergoes. Its objectives are aligned with the School's curriculum, as well as the National Science Education Standards. The course includes laboratory exercises where students can observe and apply acquired knowledge in hands-on activities.

By the end of the school year students should be able to: understand the properties of matter and how they change; show knowledge of the structure of the atom and know their way through the Periodic Table of Elements; work, interpret and balance different types of Chemical Reactions; understand the basics of electrochemistry, radioactivity, Organic and biological chemistry; differentiate the different types of bonds, structure, and binary molecules; perform qualitative and quantitative observations and apply them in mathematical operations; and understand the concepts in which the previous objectives are based.

Grades: Report cards and progress reports will be implemented as per School Regulation. Grades will be comprised of the following components:

- a. **Tests:** Tests will usually cover an entire chapter or two. I may review all material prior to each test. Some tests may require two class periods to complete; these will be announced in advance.
- b. **Quizzes:** Quizzes may or may not be announced. Pop quizzes may be given on Mondays. Quizzes will usually cover 2 or 3 sections in a chapter. I will not review for quizzes; completing and understanding the assigned homework should be sufficient preparation for a quiz.
- a. **Homework:** Homework will be assigned everyday with the exception of Fridays. It is the students' responsibility to complete all assigned tasks. I may review some, but not all homework problems. If there is not enough time for review and a student still has questions, the student must see the teacher at the end of class to schedule additional help. **Excellence in physics cannot be achieved without a certain amount of practice. Homework is a necessary part of this practice. Homework to mathematics is like basketball practice to the big game. You cannot win unless you practice!**
- b. **Conduct:** Student conduct will be observed daily and will be counted as part of the final grade. See School Regulation for additional rules.
- c. **Projects (and Laboratories):** Projects will be assigned during the year. Projects are expected to be turned in on time. Past due projects will be penalized by deducting up to 10 percent of total grade per day of tardiness.

Course Content:

First quarter

Matter and Change

Measurement and Calculations

Atoms: The Building Blocks of Matter

Arrangement of Electrons in Atoms

The Periodic Law

Second quarter

Chemical Bonding

Chemical Formulas and Chemical Compounds

Chemical Equations and Reactions

Stoichiometry

Third quarter

States of Matter

Gases

Solutions

Ions in Aqueous Solutions and Colligative Properties

Acids and Bases

Fourth quarter

Reaction Energy and Kinetics

Chemical Equilibrium

Oxidation-Reduction Reactions

Electrochemistry, Organic Chemistry, and Biological Chemistry

Absence during examinations: When a student misses a test or quiz because of sickness, a retake will be given within 5 school days only if the student provides a valid medical excuse upon his/her return. When a student misses a test or quiz without a valid excuse, he/she will be required to take it upon his/her return to school. Retakes may be given on Mondays. I will **not** provide a review for a retake; it is the student's responsibility to obtain the material and to prepare for the retake. Any other arrangements will be at the teacher's discretion.

Absence from class: In the event a student is absent from class, he/she is responsible for obtaining all material taught, including assignments. I will not re-teach any material that a student misses due to absence during class hours; again, it is the students' responsibility to find out what he/she missed and to obtain help. Being absent on the day of a test review will not exempt a student from taking the test on the assigned test day. All additional rules applicable to student absences are as per School Regulation.

Parent/Teacher Appointments: As per School Regulation. I will work with every parent as much as possible to accommodate meetings after regular school hours. Please understand that under no circumstances should a parent interrupt a class to speak to either myself or his/her child. If a parent must see his/her child, the parent has to go by the front office first.

Dear Parents: It is my expectation that by the end of the school year, my students will have gained a wealth of knowledge that will better prepare them for the next grade, for college, and for life in general. We want to have fun while we learn, but I also strongly value the qualities of honor and respect. We will practice these and other values throughout the year.

Communication is essential! I will make every effort to meet with you when needed to help your child succeed in my class. But we have to work together. Please, take the time to review your child's notebook often and ask him/her how their day went at school. Get more involved with your child's education because he/she cannot do it alone. It is normal for some students to struggle with the math involved in physics, but any problem can be resolved if we address the obstacles early on – don't wait until the report card is completed before you ask for help. I believe in your child's ability to succeed. Let's have a great year!
